

SABINO VISTA SUSTAINABLE REMODEL

The most successful remodel projects don't just trade the old for the new. They provide a new way of living that allows precious memories to be carried forward, recognize changing demands on the family and minimize the negative impact building has on the environment.

Design challenges:

- Recycle
- Reuse
- Reduce

77% of the furniture pieces and all of the artwork and accessories were recycled and reused. This successful fusion of the homeowner's antique, traditional, contemporary and Asian style furniture was accomplished with skillful use of materials, colors and finishes. Six spaces, each designed for spe-

cial purposes, are united through the artful application of pattern, color and texture.

Old windows were replaced with double glazed, low-E windows reducing energy consumption. Reduced water use was achieved by installing low flow toilets. All unused pieces of furniture were donated to charity for reuse, reducing the amount going into landfill.
